

making our water clean again

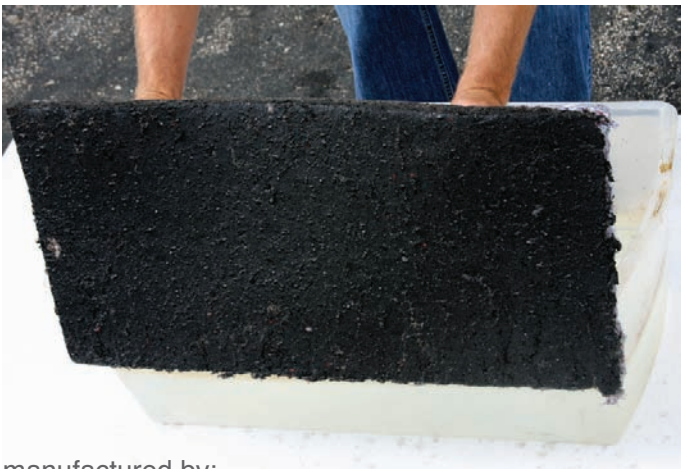

Contamination to water requires immediate action . The C-sponge will help clean up our water to prevent further harm to the environment. Clean water is a necessity for all walks of life!

Made from renewable and recycled fibers, the C-sponge is an innovative fiber mat with oil absorbing properties. The C-sponge can absorb over 10x its weight in crude oil very quickly without absorbing water. Plus the oil has the potential to be reclaimed from the C-sponge.

The C-sponge can be applied directly on top of oil on the surface of water. Unlike other sorbent products used to clean up oil, virtually no oil leaks or drips from the C-sponge when it is removed from water. The C-sponge can also be used on land and other hard surfaces to prevent the oil from contaminating the soil or staining surfaces.

- a recycled fiber mat with no added chemicals
- ability to absorb over 10x its weight
- easy to handle

The C-sponge is manufactured by Cellulose Material Solutions, llc (CMS), which is headquartered in Jenison, MI. Since its beginning, CMS has pushed the envelope by developing green, innovative products. Primarily focused in the acoustical and thermal insulation industry, CMS also manufactures ECOCELL®, industry first cellulose based insulation batts and blankets.
